

# Light Source Lineup

## Ergonomic Light Sources for a Wide Variety of Applications

The Ocean Optics line of ergonomic and smartly designed fiber-coupled LED light sources are ideal for fluorescence, spectroscopy and general fiber illumination applications. The Ultra LED high power light sources can be operated in continuous or external trigger modes.

An innovative optical design enables these fiber-coupled light sources to provide highly efficient light coupling into a single fiber optic. The proprietary electronics design provides stable high-current operation and allows the LEDs to run at high peak currents when in external trigger mode.

The controls feature a three-way switch to move the light source between continuous, off and trigger modes. A second control is used to manually adjust the drive current. A 15-pin interface connector provides access to TTL input controls, onboard memory and intensity modulation and an optional USB controller is available to control drive current, pulse width and pulse frequency via computer.

These sources are ideal for OEM integration.

Part #	Wavelength	FWHM	Min Power coupled into a 600um .22NA fiber	mAximum Drive Current CW	mAximum Drive Current Pulsed	mAximum duty Cycle in pulsed mode
